Research Summary

Sun care products are skincare products specifically designed to protect the skin from the harmful effects of ultraviolet (UV) radiation from the sun. These products include sunscreen lotions, creams, sprays, gels, and sticks, as well as after-sun products such as moisturizers and soothing gels. Sunscreens typically contain active ingredients that either absorb, reflect, or scatter UV radiation to prevent it from penetrating the skin and causing damage. Common active ingredients in sunscreens include organic compounds like avobenzone, octinoxate, and oxybenzone, as well as mineral ingredients like zinc oxide and titanium dioxide. Sun care products may also contain additional ingredients such as antioxidants, moisturizers, and vitamins to nourish and protect the skin. It is essential to use sun care products regularly, especially when spending time outdoors, to reduce the risk of sunburn, premature aging, and skin cancer caused by UV exposure. Additionally, sun care products should be applied generously and reapplied frequently, as directed on the product label, for optimal protection.
