Research Summary

Superabrasives are a class of materials known for their exceptional hardness and abrasive properties, making them highly effective for cutting, grinding, and polishing hard materials such as metals, ceramics, and composites. The primary superabrasives used in industrial applications are synthetic diamond and cubic boron nitride (cBN). These materials exhibit hardness values that far exceed traditional abrasives like aluminum oxide or silicon carbide. Superabrasives are commonly used in manufacturing processes where precision, efficiency, and surface finish are critical, such as in the automotive, aerospace, electronics, and tooling industries. They are employed in various applications, including machining, grinding wheels, honing stones, and abrasive powders, to achieve high-precision finishes, tight tolerances, and superior surface quality. Superabrasives offer advantages such as long tool life, high material removal rates, and the ability to machine or grind hard and difficult-to-machine materials with exceptional precision.

The major global manufacturers of Superabrasive include Element Six, Sandvik, ILJIN

Diamond, Zhongnan Diamond, Huanghe Whirlwind, Sino-Crystal Diamond, JINQU Superhard, CR GEMS, Anhui HongJing, Yalong Superhard Materials, Saint-Gobain, Sumitomo Electric Industries, Tomei Diamond, FUNIK, Famous Diamond, Besco Superabrasives, etc. The global players competition landscape in this report is divided into three tiers.
