Research Summary

Superfine talc refers to talcum powder that has been finely ground to produce particles of extremely small size, often in the micron or even submicron range. Talc is a naturally occurring mineral composed of magnesium, silicon, and oxygen, and it is widely used in various industries due to its unique properties, including lubricity, softness, and chemical inertness. Superfine talc is commonly used in cosmetics, pharmaceuticals, plastics, and other industrial applications where a fine and uniform particle size distribution is desired. In cosmetics, it is often used as an absorbent and texturizing agent in products such as face powders, body powders, and baby powders. In pharmaceuticals, it can be used as an excipient in tablets and topical formulations for its lubricating and anti-sticking properties. Additionally, superfine talc is utilized in plastics manufacturing to improve the mechanical properties and processability of polymers. The fine particle size of superfine talc allows for better dispersion and incorporation into various formulations, leading to enhanced performance and product quality.

The major global manufacturers of Superfine Talc include Imerys, Mondo Minerals (Elementis), Minerals Technologies Inc, IMI Fabi, Golcha Associated, Xilolite, Hayashi-
