Research Summary

Superoxide dismutase (SOD) is a crucial enzyme found in nearly all living organisms that catalyzes the conversion of superoxide radicals into molecular oxygen and hydrogen peroxide. Superoxide radicals are highly reactive molecules produced during normal cellular metabolism, and they can cause oxidative damage to cells and tissues if left unchecked. SOD plays a vital role in the antioxidant defense system by neutralizing superoxide radicals and preventing oxidative stress-related damage. There are several isoforms of SOD, including cytosolic copper/zinc SOD, mitochondrial manganese SOD, and extracellular SOD, each localized to different cellular compartments and serving distinct functions. Due to its potent antioxidant properties, SOD is implicated in various physiological processes and is studied for its potential therapeutic applications in combating oxidative stress-related diseases, such as neurodegenerative disorders, cardiovascular diseases, and aging-related conditions.

The major global manufacturers of Superoxide Dismutase include Robertet Bionov, Creative Enzymes, DSM, Zhejiang Mecore, Hunan Shizhuangyuan, Qinhuangdao
