Research Summary

Surface tension meters, also known as tensiometers or surface tensiometers, are instruments used to measure the surface tension of liquids. Surface tension is the property of a liquid that causes it to minimize its surface area and form spherical droplets. Surface tension meters measure the force required to overcome the cohesive forces at the surface of a liquid, typically by employing techniques such as the Wilhelmy plate method, Du Nouy ring method, or pendant drop method. These instruments consist of a probe or sensor that comes into contact with the liquid surface and measures the force exerted as the probe is immersed or withdrawn from the liquid. Surface tension meters are widely used in various industries, including pharmaceuticals, cosmetics, paints, coatings, adhesives, and food and beverage, to ensure product quality and optimize formulations. They provide valuable information about the physical properties and behavior of liquids, aiding in research, development, and quality control processes.

The major global manufacturers of Surface Tension Meters include DataPhysics,

Powereach, Zhong Yi Ke Xin, Pingxuan Scientific Instrument, Timepower, Kruss, Beijing Heven Scientific Instrument, Innuo Precison Instruments, Kibron, Attension(Biolin Scientific), Biolin, Thermo Cahn, etc. The global players competition landscape in this report is divided into three tiers.
