### Research Summary

A surgical needle is a slender, pointed instrument used by healthcare professionals during surgical procedures to penetrate tissues, close wounds, and facilitate the passage of sutures through tissues for wound closure. Surgical needles are typically made of stainless steel or other biocompatible materials and come in various sizes, shapes, and configurations to accommodate different surgical applications and techniques. They may have straight or curved bodies, with different degrees of curvature to suit specific surgical needs. Surgical needles may also feature a variety of tip designs, including cutting, taper, or blunt tips, depending on the intended use and the type of tissue being penetrated. Surgical needles are often attached to suture materials, such as absorbable or non-absorbable threads, to facilitate wound closure and tissue approximation. Proper selection and handling of surgical needles are essential to ensure precise and efficient tissue penetration, minimize tissue trauma, and achieve optimal surgical outcomes.
