Research Summary

Surgical robots, also known as robot-assisted surgery systems, are advanced technological platforms that enable surgeons to perform minimally invasive surgical procedures with enhanced precision, control, and dexterity. These systems consist of robotic arms equipped with surgical instruments and high-resolution cameras that are controlled by the surgeon from a console in the operating room. Surgical robots provide several advantages over traditional open or laparoscopic surgery, including improved visualization of the surgical site, greater maneuverability in confined spaces, and reduced hand tremors. They allow surgeons to perform complex procedures with smaller incisions, resulting in less tissue trauma, reduced blood loss, and faster recovery times for patients. Surgical robots are used in various surgical specialties, including urology, gynecology, general surgery, and cardiac surgery, to perform procedures such as prostatectomy, hysterectomy, cholecystectomy, and mitral valve repair. While surgical robots offer many benefits, they also require specialized training for surgeons and surgical teams, as well as significant investment in equipment and maintenance. Overall, surgical robots represent a cutting-edge technology that

continues to revolutionize the field of surgery and improve patient outcomes.

The major global manufacturers of Surgical Robots include Intuitive Surgical, Stryker, Zimmer Biomet, Medtronic, TINA VI Medical Technologies, Perfint Healthcare, MedBot, Asensus Surgical, Avatera medical GmbH, CMR Surgical Limited, Medrobotics, TransEnterix, THINK Surgical, Globus Medical, Siemens Healthineers AG, Stereotaxis, Johnson and Johnson, Corin Group (OMNI), Smith & Nephew, Veran, Venus Concept, etc. The global players competition landscape in this report is divided into three tiers.
