Research Summary

A surgical sponge, also known as a surgical gauze or laparotomy sponge, is a sterile, absorbent pad or piece of fabric used in surgical procedures to absorb blood, fluids, and other debris from the surgical site. Surgical sponges come in various sizes and shapes, ranging from small squares to large rectangular pads, and are typically made of cotton or a blend of cotton and synthetic materials. These sponges are designed to be soft, non-linting, and non-adherent to tissues, allowing for gentle absorption without causing damage to delicate tissues. Surgical sponges are used by surgical team members, such as surgeons, nurses, and surgical technicians, to mop up blood and fluids, maintain a clear surgical field, and protect organs and tissues during surgery. After use, surgical sponges are carefully counted and removed from the surgical site to prevent unintentional retention within the patient's body, which can lead to complications such as infection or obstruction. Proper handling and documentation of surgical sponges are essential to ensure patient safety and prevent adverse events during surgical procedures.

The major global manufacturers of Surgical Sponge include Medtronic, Molnlycke, BSN medical, Medline, Cardinal Health, Hartmann, Lohmann & Rauscher, Ahlstrom, Owens & Minor, B.
