### Research Summary

A surgical stapler is a specialized medical device used by surgeons to close wounds or incisions during surgical procedures. It functions by deploying rows of staples or metal clips across the tissue to secure and approximate the edges of the wound, effectively sealing it. Surgical staplers come in various designs and configurations, including manual, powered, and laparoscopic (minimally invasive) models, to accommodate different surgical needs and techniques. They are commonly used in a wide range of surgical specialties, including general surgery, colorectal surgery, thoracic surgery, and gynecologic surgery, to close tissue layers, resect organs, or create anastomoses (connections) between organs or tissues. Surgical staplers offer several advantages over traditional suturing techniques, including faster closure times, more consistent and reliable wound closure, reduced tissue trauma, and improved cosmetic outcomes. However, like any surgical instrument, the use of surgical staplers requires proper training and technique to ensure safe and effective outcomes for patients.

The major global manufacturers of Surgical Stapler include Johnson & Johnson, Medtronic, Grena, Purple Surgical, Frankman, Pelter Medical, Tianjin Rich, Braunsens,
