Research Summary

SUS-AI-alloy clad metals refer to composite materials consisting of layers of stainless steel (SUS) and aluminum alloy bonded together through a process known as cladding. These clad metals combine the corrosion resistance of stainless steel with the lightweight and high strength-to-weight ratio of aluminum alloy. The clad metal structure typically involves a thin layer of stainless steel bonded to one or both sides of an aluminum alloy core, providing enhanced durability, resistance to corrosion, and mechanical properties. SUS-AI-alloy clad metals find applications in various industries, including automotive, aerospace, construction, and electronics, where a combination of strength, corrosion resistance, and lightweight properties is desired. These materials are used in a wide range of applications, such as automotive body panels, architectural cladding, heat exchangers, and electronic enclosures, to achieve optimal performance and longevity in challenging environments.
