Research Summary

Swimming goggles are protective eyewear designed specifically for use in water activities such as swimming, diving, and water sports. They are worn over the eyes to create a watertight seal, preventing water from entering and causing irritation or blurred vision. Swimming goggles typically feature lenses made from materials like polycarbonate or plastic, which are durable, shatter-resistant, and provide UV protection for outdoor use. The lenses may also be treated with anti-fog coatings to maintain clear vision underwater. The frame of swimming goggles is often made from silicone or rubber materials that are soft, flexible, and comfortable against the skin, while also ensuring a snug fit to prevent leaks. Adjustable straps are included to secure the goggles in place during swimming activities. Swimming goggles come in various styles, sizes, and lens tints to accommodate different preferences, face shapes, and lighting conditions, providing swimmers with clear vision and eye protection while in the water.
