Research Summary

A swimming pool heat pump is an energy-efficient device used to heat pool water by transferring heat from the surrounding air into the pool. It works similarly to an air conditioner in reverse, using a refrigeration cycle to absorb heat from the ambient air and release it into the pool water. Unlike traditional electric heaters, which generate heat through electrical resistance, heat pumps are much more energy-efficient, as they move heat rather than creating it. This makes them a cost-effective option for maintaining a comfortable pool temperature throughout the swimming season, even in cooler weather. Heat pumps are durable, environmentally friendly, and offer consistent heating performance, making them a popular choice for both residential and commercial pool owners.

The major global manufacturers of Swimming Pool Heat Pump include Phnix, Fairland, New Energy Technology, Aquark, Zealux, AQUA, Micoe Solar Energy, Kolant, Hayward, Pentair, Folansi, Henan Qinzhiyuan Water Treatment, OUTES, Hstars, Hiseer, Hien New Energy, Amitime, Dimplex, FibroPool, etc. The global players
