Research Summary

Synthetic fabrics are textiles made from man-made fibers rather than natural materials like cotton, wool, or silk. These fibers are typically derived from petrochemicals, although some newer synthetic fibers are made from renewable resources like plant-based cellulose or recycled materials. Common types of synthetic fabrics include polyester, nylon, acrylic, and spandex, among others. Synthetic fabrics offer several advantages over natural fibers, including durability, wrinkle resistance, moisture-wicking properties, and the ability to retain color vibrancy. They are often used in sportswear, outdoor clothing, swimwear, and activewear due to their moisture management and quick-drying capabilities. Additionally, synthetic fabrics are frequently blended with natural fibers to enhance their performance or reduce cost. While synthetic fabrics have benefits, they also have drawbacks such as being less breathable than natural fibers and contributing to microplastic pollution when washed. Efforts to develop more sustainable synthetic fibers and improve recycling processes are ongoing to mitigate these environmental concerns.

The major global manufacturers of Synthetic Fabrics include Indorama Corporation, Toray Industries, DuPont, Mitsubishi Chemical Holdings Corporation, CNPC, Reliance Industries Limited, Toho Tenax, etc. The global players competition landscape in this report is divided into three tiers. The first tier comprises global leading enterprises that command a substantial market share, hold a dominant industry position, possess strong competitiveness and influence, and generate significant revenue. The second tier includes companies with a notable market presence and reputation; these firms actively follow industry leaders in product, service, or technological innovation and maintain a moderate revenue scale. The third tier consists of smaller companies with limited market share and lower brand recognition, primarily focused on local markets and generating comparatively lower revenue.
