Research Summary

Synthetic quartz glass UV-LED is a specialized material designed to meet the stringent requirements of ultraviolet light-emitting diodes (UV-LED). UV-LEDs emit ultraviolet light, which is critical for a variety of applications such as disinfection, curing and fluorescence excitation. Synthetic quartz glass is favored for its high optical transparency in the UV range, low fluorescence, thermal stability and resistance to UV degradation. It was chosen as the base material or encapsulation material for UV-LED packaging, ensuring efficient transmission of UV light while maintaining long-term durability and reliability. Synthetic quartz glass plays a key role in the production of high-performance UV-LEDs, promoting their widespread use in applications requiring precise UV radiation and control, such as medical devices, water treatment systems and industrial processes.
