Research Summary

A System on Module (SoM), also known as a Computer on Module (CoM), is a compact, single-board computer that integrates essential components of a computing system onto a single module. These modules typically include a processor (CPU), memory (RAM), storage (eMMC or flash memory), and various input/output (I/O) interfaces such as USB, Ethernet, HDMI, and GPIO pins. SoMs are designed to simplify the development of embedded systems and IoT devices by providing a ready-made computing platform that can be easily integrated into custom hardware designs. They allow developers to focus on application-specific features and functionalities without having to worry about the complexities of designing the core computing infrastructure. SoMs come in various form factors, such as small modules that can be soldered directly onto a carrier board or larger modules with standard connectors for easy plug-and-play integration. They are commonly used in applications such as industrial automation, robotics, medical devices, digital signage, and smart appliances, where compact size, low power consumption, and high reliability are essential requirements.

The major global manufacturers of System on Module include Advantech, Kontron,

Artesyn Embedded, MSC Technologies (Avnet), Congatec, ADLink, DFI, Portwell, Axiomtek, Eurotech, Phytex, Avalue Technology, Digi International, IEI, AAEON, Fastwel, Radisys (Reliance Industries), Toradex, ASRock, SECO srl, Technexion, etc. The global players competition landscape in this report is divided into three tiers.
