Research Summary

Tailgating detection is a security technology used to identify and prevent unauthorized individuals from gaining access to restricted areas by closely following behind an authorized person through access control points. It involves the deployment of sensors, such as infrared, motion, or proximity sensors, to monitor the flow of people through entry points. When an instance of tailgating is detected, the system triggers alerts or alarms to notify security personnel or automatically initiates security measures, such as locking down the access point, to prevent further unauthorized entry. Tailgating detection systems enhance security measures, reduce the risk of unauthorized access, and ensure compliance with security protocols in various environments, including commercial buildings, airports, government facilities, and data centers.

The major global manufacturers of Tailgating Detection include IEE S.A., IDL, Newton Security, Detex, Optex, Irisys, Kouba Systems, Fastcom Technology S.A., etc. The global players competition landscape in this report is divided into three tiers.
