### Research Summary

Tara gum, also known as *Caesalpinia spinosa* gum, is a natural polysaccharide obtained from the seeds of the tara tree (*Caesalpinia spinosa*), native to Peru. It is commonly used as a thickening, stabilizing, and gelling agent in food and beverage applications. Tara gum consists of galactomannans, a type of carbohydrate composed of galactose and mannose units. It is similar to guar gum and locust bean gum in its chemical structure and properties. Tara gum is valued for its ability to improve the texture, viscosity, and stability of food products such as dairy products, sauces, dressings, desserts, and baked goods. It is often used as a natural alternative to synthetic thickeners and stabilizers due to its plant-based origin and clean label appeal. Tara gum is considered safe for consumption and is approved for use as a food additive by regulatory agencies such as the U.S. Food and Drug Administration (FDA) and the European Food Safety Authority (EFSA).
