### Research Summary

Tartaric acid is a naturally occurring organic acid found in many fruits, particularly grapes, and is commonly used as a food additive. It is a crystalline white powder with a tart taste and is often used to add acidity and enhance flavor in food and beverages. Tartaric acid is also used as a leavening agent in baking powders and as a stabilizer in food products such as jams, jellies, and gelatin desserts. In winemaking, tartaric acid is naturally present in grapes and is responsible for the tart taste in wine. It can also precipitate out of wine as crystals known as wine diamonds or wine crystals, which are harmless but may be removed through filtration. Additionally, tartaric acid has applications in various industries, including cosmetics, pharmaceuticals, and textiles, where it is used as an ingredient in products such as skincare formulations and effervescent tablets.
