Research Summary

The TCR Static Var Compensator (SVC) is a type of power quality device used in electrical power systems to regulate voltage, improve power factor, and control reactive power. TCR stands for Thyristor-Controlled Reactor, which is the core component of the SVC. The TCR SVC consists of a bank of thyristor-controlled reactors connected in parallel with the power system. By varying the firing angle of the thyristors, the TCR SVC can dynamically adjust the reactive power absorbed or generated by the reactors, thereby compensating for fluctuations in the system voltage and reactive power demand. This helps stabilize the power system, maintain voltage levels within acceptable limits, and enhance the efficiency and reliability of electrical networks. TCR SVCs are commonly employed in industrial plants, utility substations, and other large-scale power systems to mitigate voltage flicker, improve power factor correction, and ensure smooth and stable operation of electrical grids.

The major global manufacturers of TCR Static Var Compensator (SVC) include Taikai

Power Electronic, NR Electric, CRERT, Guirong Xieping, Rongxin Power Electronic, Liaoning Lide Investment Holding Group, etc. The global players competition landscape in this report is divided into three tiers.
