Research Summary

Teeth whitener, also known as teeth bleaching agents or teeth whitening products, refers to substances or products used to lighten the color of teeth and reduce stains or discoloration. These products work by either removing surface stains on the enamel or penetrating the enamel to change the color of the tooth structure. Common teeth whitening agents include hydrogen peroxide or carbamide peroxide, which are effective at breaking down stains and whitening teeth. Teeth whitening products are available in various forms such as whitening toothpaste, whitening strips, whitening gels, and professional treatments performed by dentists using stronger whitening agents. While teeth whitening can improve the appearance of teeth, it is important to use these products as directed to avoid tooth sensitivity, gum irritation, or damage to tooth enamel. Professional dental consultations are recommended for personalized whitening treatments and to ensure dental health during the whitening process. Additionally, maintaining good oral hygiene and avoiding staining foods and beverages can help prolong teeth whitening results.
