Research Summary

Teeth whitening products are treatments designed to lighten the color of teeth and remove stains or discoloration, resulting in a brighter and whiter smile. These products come in various forms, including toothpaste, gels, strips, pens, trays, and professional treatments performed by dentists. The active ingredients in teeth whitening products, such as hydrogen peroxide or carbamide peroxide, work to break down stains on the tooth surface and penetrate the enamel to bleach the underlying dentin. While over-the-counter products are widely available for at-home use, professional treatments typically involve higher concentrations of whitening agents and may provide more immediate and noticeable results. However, it's important to use teeth whitening products as directed and consult with a dentist to ensure safety and efficacy, as improper use can lead to tooth sensitivity or damage to the gums.
