Research Summary

A telecentric camera objective is a specialized lens system used in machine vision and imaging applications to produce images with consistent magnification and minimal distortion. Unlike conventional lenses, which focus light rays from various angles onto a single focal point, a telecentric lens ensures that light rays are parallel to the optical axis as they pass through the lens. This results in images where objects appear the same size regardless of their distance from the lens, making telecentric lenses ideal for precise measurements and accurate dimensional analysis in fields such as metrology, quality control, and inspection systems. Telecentric camera objectives are particularly useful for imaging objects with complex shapes or surfaces, as they minimize perspective distortion and ensure uniformity in image magnification across the entire field of view.

The major global manufacturers of Telecentric Camera Objective include Moritex Corporation, Sill Optics GmbH & Co. KG, KOWA Company.Ltd., Edmund Optics, Computar (CBC Group), Jenoptik, Opto Engineering, VS Technology, Keyence
