Research Summary

A telemonitoring system is a remote monitoring solution that allows healthcare providers to monitor patients' health status and vital signs from a distance. It typically involves the use of medical devices, sensors, and communication technology to collect and transmit patient data to a central monitoring station or healthcare provider. Telemonitoring systems can track various health parameters such as blood pressure, heart rate, blood glucose levels, oxygen saturation, and weight. This data is often transmitted in real-time or at scheduled intervals, allowing healthcare professionals to monitor patients' conditions continuously and intervene promptly if necessary. Telemonitoring systems are commonly used for managing chronic conditions, post-surgery recovery, remote patient monitoring, and aging in place initiatives, enabling patients to receive high-quality care in their homes while reducing the need for frequent hospital visits.

The major global suppliers of Telemonitoring System include Medtronic, Philips Healthcare, Boston Scientific Corporation, Abbott, GE Healthcare, Nihon Kohden, Abbott, Honeywell, SHL Telemedicine, TeleMedCare, etc. The global players
