### Research Summary

Telepresence robots are robotic devices equipped with audio, video, and remote control capabilities that enable users to interact and communicate with others in a remote location. These robots typically consist of a mobile base with wheels or tracks, a display screen or camera for video conferencing, microphones and speakers for audio communication, and sensors for navigation and obstacle avoidance. Users can remotely control the movements and actions of the telepresence robot from a computer or mobile device, allowing them to navigate through a physical environment, interact with people, and attend events or meetings in distant locations as if they were physically present. Telepresence robots are commonly used in various applications such as telecommuting, remote collaboration, healthcare, education, and social interaction, offering a convenient and immersive way to bridge the distance between individuals and facilitate remote communication and participation.
