### Research Summary

Tembotrione is a selective herbicide primarily used for weed control in maize (corn) crops. It belongs to the group of chemicals known as HPPD inhibitors, which inhibit the activity of the enzyme 4-hydroxyphenylpyruvate dioxygenase (HPPD). This enzyme is involved in the production of essential pigments in plants, and inhibiting its activity leads to the accumulation of toxic intermediates and ultimately results in the death of susceptible plants. Tembotrione is effective against a broad spectrum of weeds, including both grasses and broadleaf weeds, and is often used in combination with other herbicides to improve efficacy and manage herbicide resistance. It is applied as a pre-emergence or post-emergence herbicide and is commonly formulated as an emulsifiable concentrate or suspension concentrate for use in agriculture. Tembotrione is valued for its low toxicity to mammals and aquatic organisms, as well as its favorable environmental profile compared to some older herbicides.

The major global manufacturers of Tembotrione include Bayer CropScience, etc. The global players competition landscape in this report is divided into three tiers. The first tier comprises global leading enterprises that command a substantial market share, hold
