Research Summary

Temporary bonding adhesive, also known as temporary adhesive or temporary bonding material, is a type of adhesive used to temporarily join two surfaces together. Unlike permanent adhesives, which form strong, long-lasting bonds, temporary bonding adhesives are designed to provide temporary adhesion that can be easily removed or disassembled without causing damage to the surfaces. These adhesives are commonly used in applications where temporary assembly or positioning is required, such as in temporary signage, fixture assembly, packaging, prototyping, and electronics manufacturing. Temporary bonding adhesives may come in various forms, including tapes, sprays, films, or liquid adhesives, and they typically exhibit properties such as low tackiness, repositionability, and easy removability. They provide a convenient and versatile solution for temporary bonding needs while allowing for easy rework or disassembly when necessary.

The major global manufacturers of Temporary Bonding Adhesive include 3M, Daxin Materials, Brewer Science, AI Technology, YINCAE Advanced Materials, Micro

Materials, Promerus, Daetec, etc. The global players competition landscape in this report is divided into three tiers.
