Research Summary

Terbufos is a chemical compound that belongs to the class of organophosphate insecticides. It is primarily used as a pesticide to control soil-dwelling insects, particularly nematodes, in agricultural crops such as corn, soybeans, cotton, and potatoes. Terbufos works by inhibiting the activity of acetylcholinesterase, an enzyme essential for the proper functioning of the nervous system in insects. This disruption leads to the accumulation of acetylcholine, resulting in paralysis and eventual death of the targeted pests. Due to its potential toxicity to humans and non-target organisms, terbufos is subject to strict regulations regarding its use, handling, and disposal. It is important for users to follow safety precautions and application guidelines to minimize risks to human health and the environment.

The major global manufacturers of Terbufos include AMVAC Chemical, Coromandel, etc. The global players competition landscape in this report is divided into three tiers.
