Research Summary

Tert-butyl acrylate (TBA) is a chemical compound that belongs to the class of acrylic esters. It is derived from acrylic acid and contains a tert-butyl group (-C(CH₃)₃) attached to the ester functional group. TBA is commonly used as a monomer in the production of various polymers and copolymers through processes such as free radical polymerization. Its chemical structure and properties make it suitable for use in coatings, adhesives, sealants, and other industrial applications. TBA-based polymers exhibit characteristics such as good adhesion, flexibility, weatherability, and resistance to chemicals and UV radiation, making them valuable in coatings for automotive, architectural, and industrial purposes. Additionally, TBA can be copolymerized with other monomers to tailor the properties of the resulting polymers for specific applications. As with any chemical compound, proper handling, storage, and disposal practices should be followed to ensure safety and environmental protection.
