Research Summary

Tetraacetythylenediamine (TAED) is a chemical compound commonly used as a bleach activator in laundry detergents and household cleaning products. It is a white crystalline solid that is soluble in water and organic solvents. TAED works by reacting with hydrogen peroxide, a common bleaching agent, to form a more effective bleach called peracetic acid. This reaction occurs at lower temperatures, allowing for effective stain removal and whitening of fabrics even in cold water wash cycles. TAED is preferred in laundry detergents because it enhances the performance of hydrogen peroxide-based bleaching systems, particularly in removing tough stains such as blood, grass, and wine. Additionally, TAED is considered environmentally friendly as it degrades into harmless byproducts after use.

The major global manufacturers of Tetraacetythylenediamine(TAED) include Warwick Chemicals, WeylChem Wiesbaden, Zhejiang Jinke, Hongye Holding Group, etc. The global players competition landscape in this report is divided into three tiers.
