Research Summary

Tetrabromophthalic anhydride (TBPA) is a brominated flame retardant commonly used in the production of plastics, textiles, and other materials to improve their fire resistance properties. It is a white crystalline solid that is soluble in organic solvents. TBPA works by releasing bromine radicals upon exposure to heat or flame, which then interfere with the combustion process, thereby reducing the flammability of the material and slowing down the spread of fire. Due to its effectiveness in enhancing fire safety, TBPA is widely used in a variety of applications, including electronic components, building materials, and automotive parts. However, like other brominated flame retardants, TBPA has raised concerns about its potential environmental persistence and toxicity, leading to regulatory restrictions and efforts to find alternative flame retardants with lower environmental impact.

The major global manufacturers of Tetrabromophthalic Anhydride (TBPA) include Albemarle(US), Great Lakes(US), ICL-IP(IL), Ozeki(JP), Yancheng Rongxin(CN),
