Research Summary

Tetramethylammonium Hydroxide (TMAH) Solution is a strong alkaline compound consisting of a quaternary ammonium cation (tetramethylammonium) and hydroxide anion. It is typically used as a developer in photolithography processes in the semiconductor industry, where it helps to remove photoresist material from substrates during the production of integrated circuits. TMAH is also employed in organic synthesis and as a reagent in chemical analysis. The solution is highly corrosive and can cause significant irritation or damage to skin, eyes, and mucous membranes. Because of its toxicity and corrosive properties, handling TMAH requires proper safety precautions, including protective clothing and eye protection.
