### Research Summary

A theodolite is a precision optical instrument used for measuring angles in the horizontal and vertical planes. It consists of a telescope mounted on a base with graduated circles for horizontal and vertical rotation. The telescope can be rotated horizontally and vertically, allowing users to precisely measure angles between distant points.

Theodolites are commonly used in surveying, construction, and engineering for tasks such as measuring angles, determining elevations, aligning structures, and establishing boundaries. Modern theodolites may also feature electronic components for digital readouts and data recording, but the fundamental principle remains the same: accurate angle measurement for various applications requiring precise spatial orientation.

The major global manufacturers of Theodolite include Hexagon, Topcon, Trimble, EIE Instruments, South Group, Sanding, FOIF, TJOP, Dadi, Boif, KOLIDA, etc. The global players competition landscape in this report is divided into three tiers.
