Research Summary

Thermal barrier coatings (TBCs) are advanced materials applied to surfaces exposed to high temperatures to protect underlying components from heat damage and improve their performance and durability. These coatings are commonly used in aerospace, gas turbine engines, automotive engines, and industrial gas turbines. TBCs typically consist of a ceramic topcoat applied over a metallic bond coat, which is in turn applied onto the substrate material. The ceramic topcoat provides excellent thermal insulation, reducing the heat transfer to the underlying substrate and allowing it to operate at higher temperatures without degradation. This helps to extend the lifespan of components, improve fuel efficiency, and enhance overall system performance. Additionally, TBCs can also provide corrosion resistance and thermal shock resistance, making them invaluable in harsh operating environments.

The major global manufacturers of Thermal Barrier Coatings (TBC) include Oerlikon Group, Praxair Surface Technologies, TOCALO, Tosoh Corporation, Saint-Gobain, Treibacher Industrie AG, H?gan?s AB, Showa Denko, Honeywell International
