Research Summary

Thermal infrared imagers are devices that capture and visualize infrared radiation emitted by objects based on their temperature variations. Unlike visible light cameras, thermal infrared imagers operate in the infrared spectrum, allowing them to detect heat signatures and produce images that highlight temperature differences. These imagers use specialized sensors to detect the thermal radiation emitted by objects, and the resulting images display varying colors or shades corresponding to different temperatures. Commonly used in applications such as predictive maintenance, building inspections, and search and rescue operations, thermal infrared imagers provide valuable insights by revealing hotspots, identifying potential issues, and enhancing visibility in low-light conditions. These devices find applications in diverse fields, including industrial monitoring, electrical inspections, and firefighting, where the ability to visualize heat patterns is crucial for safety and efficiency.

The major global manufacturers of Thermal Infrared Imagers include FLIR Systems Inc., L3Harris Technologies, Inc., Lockheed Martin, Thales Group, GUIDE INFRARED, Fluke
