Research Summary

Thermal insulation silicone sponge is a specialized material used for insulating and protecting against heat in various applications. It is made from silicone rubber that is foamed to create a sponge-like structure, which provides both thermal insulation properties and flexibility. This silicone sponge is highly heat-resistant and can withstand temperatures ranging from -60°C to 220°C (-76°F to 428°F), making it ideal for use in environments where high temperatures are present. Additionally, it exhibits excellent compression set resistance, meaning it can maintain its shape and properties even after repeated compression cycles. Thermal insulation silicone sponge is commonly used in industries such as automotive, electronics, aerospace, and appliances for applications such as gasketing, sealing, cushioning, and thermal insulation. Its flexibility, durability, and heat resistance make it a versatile material for protecting sensitive components and ensuring efficient thermal management in various products and systems.
