Research Summary

Thermometers are instruments designed for measuring temperature. They come in various types, each employing different principles for temperature detection. Common types include mercury thermometers, which use the expansion of mercury in a glass tube to indicate temperature changes; digital thermometers, which provide a numerical readout of the temperature using electronic sensors; infrared thermometers, capable of measuring temperature without direct contact by detecting infrared radiation emitted by an object; and thermocouples, which generate a voltage proportional to temperature differences. Thermometers find widespread use in diverse applications, from everyday household use to scientific and industrial settings. They play a critical role in monitoring and controlling temperature in processes, equipment, and environments, ensuring optimal conditions for various activities, such as cooking, healthcare, weather monitoring, and industrial processes.

The major global manufacturers of Thermometers include Omron Healthcare, A&D Medical, Innovo Medical, 3M, Terumo Medical Corporation, American Diagnostic Corporation, CITIZEN SYSTEM, Exergen Corporation, HICKS Thermometer, KAZ,
