Research Summary

Thermoplastic edgeband is a material used in the furniture and cabinetry industry to finish and protect the exposed edges of various panels and surfaces. Typically made from thermoplastic polymers, such as PVC (polyvinyl chloride) or ABS (acrylonitrile butadiene styrene), thermoplastic edgebanding is applied to the edges of particleboard, MDF (medium-density fiberboard), or plywood panels using heat and pressure. The thermoplastic nature of the edgeband allows it to be easily melted and adhered to the substrate, creating a seamless and durable finish that protects against moisture, impact, and wear. Thermoplastic edgebanding is available in a variety of colors, patterns, and textures, allowing for customization and enhancing the aesthetics of furniture and cabinetry. The use of thermoplastic edgebanding streamlines the manufacturing process, providing a cost-effective and efficient solution for achieving both functional and decorative edge treatments in the production of furniture and other wood-based products.

The major global manufacturers of Thermoplastic Edgeband include Surteco Group SE,
