Research Summary

Thermoplastic glass fiber reinforced plastics (GFRP) are composite materials that combine a thermoplastic polymer matrix with glass fiber reinforcements. The thermoplastic matrix provides the ability to melt and reshape the material multiple times, while the glass fibers contribute strength, stiffness, and improved mechanical properties. The combination of these materials results in a lightweight, durable, and versatile composite suitable for various applications. Thermoplastic GFRP is commonly used in industries such as automotive, aerospace, and construction for components that require a balance of strength, impact resistance, and processability. The use of glass fibers enhances the structural integrity of the thermoplastic matrix, providing a high-performance material with applications ranging from structural components to consumer goods where lightweight and durable materials are essential.

The major global manufacturers of Thermoplastic Glass Fiber Reinforced Plastics include BASF, Evonik, SABIC, DSM, Lanxess, Avient, Xenia Materials, SGL Carbon,
