### Research Summary

Thermoset prepreg refers to a composite material made by impregnating reinforcing fibers with a thermosetting resin matrix in a pre-cured state. The term "prepreg" stands for "pre-impregnated," indicating that the resin is partially cured before being combined with the reinforcing fibers. The reinforcing fibers, often fiberglass, carbon, or aramid, provide strength and stiffness to the composite, while the thermosetting resin undergoes a curing process, typically through heat and pressure, to achieve its final hardened state. Thermoset prepreps are used in advanced manufacturing processes such as autoclave molding and vacuum bagging to create lightweight and high-strength components. They are prevalent in aerospace, automotive, and sports industries, where their ability to withstand high temperatures, excellent mechanical properties, and resistance to environmental conditions are crucial for performance and durability.

The major global manufacturers of Thermoset Prepreg include Hexcel, AVIC Aviation High-Technology, Toray, Solvay, Mitsubishi Chemical, Teijin Group, Axiom Materials (Kordsa), SGL Group, ENEOS Techno Materials, Jiangsu Hengshen, Gurit, GW
