Research Summary

Thermostatic bimetal is a type of composite material used in temperature-sensitive devices and controls. It consists of two different metals with different coefficients of thermal expansion bonded together. Typically, the two metals used are steel and copper or steel and brass. When exposed to changes in temperature, the two metals expand or contract at different rates, causing the bimetal strip to bend. This bending action is utilized in various applications to actuate switches, valves, or other mechanical devices in response to temperature changes. For example, thermostats in heating and cooling systems often use thermostatic bimetal strips to control the temperature by opening or closing electrical contacts. Similarly, thermostatic bimetal strips are used in automotive engine thermostats to regulate coolant flow based on engine temperature. Thermostatic bimetal is valued for its reliability, precision, and cost-effectiveness in temperature control applications.

The major global manufacturers of Thermostatic Bimetal include Wicked Group, Kanthal, Shivalik Bimetal Controls, Telcon Bimetals, Proterial Metals, Aperam,
