### Research Summary

Thermostatic mixing valves are plumbing devices designed to control and regulate the temperature of water by blending hot and cold water supplies. These valves maintain a constant and safe outlet temperature, preventing scalding or discomfort from extremely hot or cold water. They are commonly used in domestic and commercial settings, such as showers, faucets, and other water fixtures. Thermostatic mixing valves contain a temperature-sensitive element that adjusts the proportions of hot and cold water to achieve and maintain a preset temperature. This ensures a consistent and safe water temperature for users. The valves play a crucial role in preventing burns and injuries, making them essential in environments where precise control of water temperature is paramount, such as in healthcare facilities, schools, and residential bathrooms.

The major global manufacturers of Thermostatic Mixing Valves include Watts, Armstrong, Caleffi, Cash Acme, Acorn, Zurn, Leonard, Bradley, etc. The global players competition landscape in this report is divided into three tiers.
