### Research Summary

Three-phase distribution boards are electrical panels used in power distribution systems to manage and distribute electrical energy in a three-phase system. These distribution boards, also known as electrical panels or breaker panels, serve as central points for connecting and controlling multiple electrical circuits within a facility. In a three-phase system, the electrical power is generated, transmitted, and distributed in three alternating currents with a phase difference of 120 degrees. Three-phase distribution boards are equipped with circuit breakers or fuses for each phase to protect the electrical circuits from overloads and short circuits. They play a crucial role in organizing and distributing electrical power efficiently and safely across industrial, commercial, and residential settings, allowing for the effective utilization of three-phase electrical systems to meet the energy needs of various equipment and devices.

The major global manufacturers of Three Phase Distribution Boards include Eaton, ABB, Schneider Electric, Legrand, Hager, Siemens, Chint, Larsen & Toubro, Arabian Gulf Switchgear, Blakley Electrics, ESL Power Systems, IEM, East Coast Power
