### Research Summary

A three-phase uninterruptible power supply (UPS) is a critical power protection system designed to provide continuous and reliable power to three-phase electrical loads, ensuring uninterrupted operation during power disruptions. Three-phase UPS systems are particularly crucial for industrial facilities, data centers, and critical infrastructure where a stable power supply is essential. These systems are equipped with rectifiers to convert incoming AC power into DC, energy storage in the form of batteries, and inverters to convert stored DC power back to AC for distribution to three-phase loads. The three-phase configuration enables efficient power distribution across various industrial and commercial applications, supporting equipment and systems that operate on three-phase power. Three-phase UPS systems play a vital role in preventing downtime, protecting sensitive electronic equipment, and maintaining the stability and reliability of critical processes in sectors where uninterrupted power is imperative.

The major global manufacturers of Three-phase UPS include Schneider-Electric, Emerson, ABB, EATON, GE, S&C, Riello, AEG, Legrand, Toshiba, KSTAR, Socomec,
