Research Summary

A thromboelastography (TEG) analyzer is a medical diagnostic device used to assess the viscoelastic properties of blood and its clotting ability in real-time. It measures the entire process of blood clot formation, from initial fibrin formation to clot strengthening and stabilization. The TEG analyzer provides a comprehensive analysis of hemostasis by generating a graphical representation (TEG trace) that includes key parameters such as clotting time, clot formation rate, clot strength, and fibrinolysis. This information is valuable in assessing and managing coagulation disorders, guiding transfusion strategies during surgery, and monitoring patients with bleeding or clotting disorders. Thromboelastography has become an essential tool in perioperative and critical care settings, offering a dynamic and holistic view of the clotting process compared to traditional static coagulation tests.

The major global manufacturers of Thromboelastography Analyzer include Haemonetics, Lepu Technology, Biomart, Medcaptain, Ud-bio, Chongqing Nanfang, WITEYE, Render, Guizhou Jinjiu Biotech, Chongqing Dingrun, Zhejiang Shengyu, Bio-
