Research Summary

Thymidine is a nucleoside, a fundamental component of nucleic acids like DNA. It consists of a pyrimidine base called thymine and a deoxyribose sugar molecule, forming a key building block in the DNA structure. Thymidine plays a vital role in DNA replication, as it serves as one of the units that make up the DNA sequence. During cell division, thymidine is incorporated into the growing DNA strands, contributing to the accurate transmission of genetic information to daughter cells. It is one of the four nucleosides crucial for encoding genetic information, alongside adenine (A), cytosine (C), and guanine (G). Thymidine is either obtained through the diet or synthesized within the body, and its availability is essential for the normal functioning and integrity of genetic material in living organisms.

The major global manufacturers of Thymidine include Lonza, Carbopharm GmbH, Zhejiang NHU, Zhejiang Xianfeng Science Technology, Anhui Golden Sun Biopharmaceuticals, Hebei Anminuo, Ducheng, Chengzhi, etc. The global players competition landscape in this report is divided into three tiers.
