Research Summary

Time and attendance systems are software-based solutions designed to track and manage employee working hours, attendance, and related data in a streamlined and automated manner. These systems often replace traditional paper-based methods and manual timekeeping processes, offering increased accuracy and efficiency. Employees can clock in and out using various methods such as biometric scans, RFID cards, or PIN codes, which are then recorded and stored electronically. Time and attendance systems provide real-time data on employee attendance, hours worked, overtime, and leave balances. They also facilitate payroll processing by automating the calculation of worked hours and ensuring compliance with labor regulations. These systems contribute to improved workforce management, reduced administrative burden, and enhanced accuracy in tracking and managing employee time-related information within organizations.

The major global suppliers of Time and Attendance Systems include ADP, Kronos, Insperity, Ultimate Software, Data Management Inc., Synerion, ISolved, Redcort,
