Research Summary

A time switch is an electronic or electromechanical device designed to control the activation and deactivation of electrical devices or systems at predetermined times. These switches enable users to schedule the operation of lights, appliances, heating systems, and other electrical loads, automating repetitive tasks and promoting energy efficiency. Time switches can be programmable, allowing users to set specific on and off times for different days of the week. They find applications in various settings, including homes, offices, and industrial facilities, where the automation of electrical devices based on a predefined schedule is desired.
