Research Summary

Tire changers are specialized machines or tools designed for the removal and installation of tires on automotive wheels. These devices are commonly used in automotive repair shops, tire service centers, and garages. Tire changers facilitate the efficient and safe removal of old or damaged tires from rims and the installation of new ones. They typically consist of a rotating turntable, a bead-breaking mechanism, and a mounting/demounting tool. The process involves securing the wheel on the turntable, breaking the bead between the tire and the rim, and then using the mounting/demounting tool to disassemble or assemble the tire from/to the wheel. Tire changers vary in complexity and can be manual, semi-automatic, or fully automatic, catering to different levels of user expertise and service requirements. The use of tire changers contributes to the streamlined and quick replacement of tires, reducing manual labor and ensuring proper tire installation, which is crucial for vehicle safety and performance.
