### Research Summary

Titanium powder is a finely divided form of titanium metal produced through various methods, including the reduction of titanium tetrachloride or the hydriding/dehydriding process. This powder possesses unique characteristics that make it valuable in various industrial applications. Titanium powder is frequently used in powder metallurgy, where it can be compacted and sintered to create solid components with specific mechanical properties. Additionally, titanium powder plays a crucial role in additive manufacturing processes, such as powder bed fusion (selective laser melting or electron beam melting), enabling the fabrication of complex and lightweight titanium components for aerospace, medical, and automotive industries. Its high melting point, corrosion resistance, and biocompatibility contribute to the suitability of titanium powder for advanced manufacturing processes, allowing for the production of intricate and customized titanium parts.

The major global manufacturers of Titanium Powder include ATI, Cristal, OSAKA Titanium, Fengxiang Titanium, ADMA Products, Reading Alloys, MTCO, TLS Technik,
