Tongue depressors, also known as tongue blades, are flat, thin, wooden or plastic tools used in medical settings for examining the throat and mouth. Typically measuring around 6 inches in length, these devices are designed to gently hold down the tongue, allowing healthcare professionals to perform examinations of the oral cavity, throat, and tonsils. Tongue depressors are commonly used during routine medical check-ups, dental examinations, and throat inspections. They provide a convenient and hygienic means to keep the tongue in a controlled position, facilitating a clear view of the relevant anatomical structures. While traditionally made of wood, modern tongue depressors also come in plastic variations. Additionally, they are sometimes used in arts and crafts or other non-medical applications due to their flat and smooth characteristics.
